PGH BRICKS & PAVERS™

PGH Bricks & Pavers™ is one of Australia's largest clay brick manufacturers. It offers a broad range of bricks and pavers for residential, architectural and commercial applications on Australia's East coast.

PGH Bricks & Pavers™ is committed to service excellence and has manufacturing capabilities in South Australia, Victoria, New South Wales and Queensland.

PGH Bricks & Pavers™ has a long history and deep expertise in brickmaking excellence. The name first came into existence in 1958 when the building companies established by Maxwell Porter and David Galbraith (incorporated in 1899 and 1949 respectively) merged with Hanson Consolidated industries.

PGH Bricks & Pavers™ was then part acquired by CSR in 1989, marking CSR's first foray into the brick industry. In May 2015, CSR and Boral formed a joint venture, Boral CSR Bricks Pty Ltd, which combined their brick operations along the east coast of Australia. This

partnership brought together the best of Boral and CSR's brick offering under the one brand of PGH Bricks & Pavers™. In November 2016, CSR acquired Boral's interest in the joint venture. PGH Bricks & Pavers™ is now wholly owned by CSR.

CSR is one of Australia's oldest companies and today has revenues over \$2.0 billion and is part of the ASX100 with over 3,000 employees across Australia and New Zealand.

See csr.com.au for more information.

WHY CHOOSE BRICKS?

SOLID INVESTMENT

Building with bricks equals fewer upfront costs and virtually no ongoing maintenance costs, as well as energy bill savings. When it's time to sell, brick rates well because it's trusted over newer cladding materials that haven't stood the test of time.

ENERGY EFFICIENT

Brick insulates in a way most materials do not. By following good design principles and combining bricks with insulation, your home will keep warm in winter and cool in summer, so you'll love coming home.

CREATIVE COLOUR & CHOICE

With our diverse range of sizes, shapes and textures, and over 180 colours, we have a brick to meet your needs. With smart design, blending of brick types and diverse bricklaying techniques, the options with bricks are truly endless.

STRONG & SAFE

Bricks are permanent. They're weather and age proof. Bricks don't get tired like other man made materials. They won't twist or warp, rot or decay, erode or dent. They are resistant to the extremes of the Australian climate and being non-combustible, they don't assist the spread of fire.

LOW MAINTENANCE

Bricks require virtually no upkeep or repairs, avoiding ongoing costs. Unlike other products, the colour is baked into the product so it lasts for a lifetime. Remember, render will need to be repainted over time, an important fact to consider when looking at the 'whole-of-life' cost of your home.

SOUND REDUCTION

The density of brick makes for a quiet home, with dramatically reduced external sound, such as aircraft, road traffic and noisy neighbours. Brick can also reduce noise transfer within the home when used on internal walls.

HOW TO CHOOSE A BRICK.

Bricks are strong, durable and a popular choice for new home builders and renovators. However, with a broad range of great options available, choosing bricks may seem overwhelming! Here are some tips to guide you through the process.

1 RESEARCH THE STYLE OF THE HOUSE

A brick's colour, shape, size and texture will influence the overall look and feel of your house, so make sure you choose a brick that suits the design of your home. It's worth getting ideas from the internet, display homes, websites, magazines and PGH™ Display Centre Colour Consultants. There are many options and combinations to choose from to achieve your design vision.

2 CONSIDER YOUR LOCATION

Bricks are graded to suit different environmental conditions. The location of your home will determine which grade you need. If you live near the coast or have high-saline soil, you should use an exposure (EXP)* grade brick, they have heightened resistance to salt attack.

General purpose (GP) grade bricks are suited to all other building types and locations.

3 ACHIEVE THE DESIRED LOOK THROUGH COLOUR, TEXTURE & SIZE

Add character with texture

Brick texture can add character, charm and individuality to a home. Brick textures can vary from a smooth finish, which has a consistent surface appearance and straight edges, to torn textures with a dragged or ripped appearance across the face for a weathered look. You can even get glazed bricks that have a shiny ceramic tile look for feature walls or beautiful sandstock bricks that give your home an authentic raw beauty that no other material can achieve.

Create visual interest with size

Bricks are available in a range of dimensions. Decisions about size may depend on a range of factors, from the proportions of the house to the purpose of the bricks. Bricks are often used for decorative applications, such as feature walls, window sills and fire places. Different sizes and shapes can be combined to create visual interest and depth.

*(EXP) bricks are recommended for homes located up to one kilometre from a surf coast or 100 metres from a non-surf coast.

4 PUTTING IT ALL TOGETHER

Don't forget the details

When it comes to mortar (what binds bricks together) you need to consider the colour and finish, as both will have a striking impact on the look of your bricks.

An off-white mortar between darker coloured bricks will add contrast and highlight the shape of each brick. Whereas matching mortar to brick will soften the brickwork.

Common Mortar Colours:

- Natural or grey
- White or off white
- Cream or buff

With the mortar joint finish, you can choose raked, ironed, flush or struck, depending on whether you want to hero or soften the brick work. For instance, a Raked Joint will create shadowing for contrast and interest. A Flush Joint will minimise shadow and create a flat look. Be mindful, mortar colours can vary depending on the sand and/or cement source.

RAKED JOINT IRONED JOINT FLUSH JOINT STRUCK JOINT

Laying it all together: Bond Pattern

A bond is the pattern in which bricks are laid. The most common bond is Stretcher Bond which consists of courses of full bricks where every course is offset half a brick from the course below. Stacked and Flemish are also popular and achieve an alternative look.

STRETCHER BOND

STACKED BOND

FLEMISH BOND

HOW WE CAN HELP.

We know that building and renovating can be a confusing and stressful experience. We want to ensure your experience is an enjoyable one, so we've provided a range of tools to help you along the journey.

VISUALISE YOUR DREAM SCHEME WITH COLOURTOUCH

ColourTouch enables you to mix and match PGH™ bricks and pavers with roof tiles and trims to create a conceptual exterior of your dream home. It's a great place to start when visualising what colours and textures work well together. Use our predefined colour schemes or create your own.

Visit colourtouch.com.au today to discover a world of possibilities.

SEEING IS BELIEVING AT PGH™ SELECTION CENTRES

When you visit our Selection Centres, one of our Colour Consultants will be able to assist you through your brick selection process. Given your facade is made up of 60% bricks, 30% roof and 10% gutter, we want to ensure you achieve the look you're after. We even have specially designed selection tools to make the selection of your whole exterior scheme easier.

There is nothing like seeing colours and textures in real life. We have an array of bricks and pavers on display in our centres. When you've decided on your preferred brick, samples are available to show your family and friends.

THE PGH™ WEBSITE - YOUR ONE STOP SHOP FOR INFORMATION AND INSPIRATION

The PGH™ website aims to educate, inspire and inform. Learn why bricks are a brilliant building material, get information on brick trends, be inspired by our photo gallery and see our extensive collection.

DRY PRESSED ARCHITECTURAL

Our Dry Pressed Architectural bricks represent PGH's highest pinnacle of luxury and style in Australian-made clay brick products.

Exquisitely produced at state-of-the-art brick-making facilities using a time-honoured dry pressed method, this range presents with exceptional consistency of strength, dimensional accuracy and colour all the way through the brick. Produced under high compression, dry clay is pressed into individual moulds, which creates a magnificent, solid colour-through brick with sharp, clean and accurate edges.

Highly sought after and specified by architects, developers, quality builders and discerning home owners, the PGH™ Dry Pressed Architectural brick range is the choice for superior showpieces and builds in residential and commercial applications.

DRY PRESSED ARCHITECTURAL SPLITS

Our Dry Pressed Architectural bricks in 50mm sizes, otherwise known as Splits, offer additional versatility, enabling architects and designers to be more creative in their approach with greater design possibilities.

In addition to our Splits and to complete the full versatility of this range, there are numerous special shape options available to complete a consistent brick design, enabling full brick design options in applications such as archways, fireplaces, window frames and bond patterns.

For Splits and Shapes minimum order quantities and lead times apply. To view visit our website pghbricks.com.au

CRAFTED SANDSTOCKS

Our Crafted Sandstock bricks honour an important part of our history, the traditional method of brick making. Only a handful of companies still make these 'Convict Bricks'.

Incredibly wet clay is dropped into large sawdust lined moulds to produce solid bricks with very individual rough and irregular textures and shapes, giving them their hand-made character and beautiful appearance. Fired in intermittent batch kilns, we can alternate the temperature to produce a variety of colours and tones, reminiscent of the very old down draught wood or coal fired kilns.

PGH™ Crafted Sandstock bricks are timeless in their look and feel and deliver a statement of Australian tradition and authenticity. Not unexpectedly, as a true brick representation, designs specifying this style of brick can transcend between modern interpretations of contemporary rustic architectural design whilst also being completely suited to achieving an authentic colonial period or traditional heritage look.

CRAFTED SANDSTOCKS SPLITS

This 50mm Split size option is increasingly popular and is often seen in more custom and contemporary design interpretations of the timeless strength and style of bricks.

Not only used to achieve a more creative brick design component of the external façade, Splits are also now being used more and more to bring the outside in as part of the interior design elements.

Sandstock shapes are also available for more design options. Minimum order quantities and lead time apply. For more information go to pghbricks.com.au or visit us at a PGH™ Selection Centre.

MANHATTAN

INDUSTRIAL CHIC BRICKS

The Industrial Chic movement has fuelled the inspiration behind the creation of our bespoke, locally made Manhattan Collection of recycled-look and feel bricks.

The urban and raw Manhattan Collection is signified by bricks that have been purpose-made to take on the weathered and tumbled imperfections of intended knots, scratches and nicks and colour blending designed to bring to life an edgy, exposed brick wall look and feel.

But unlike many recycled brick products, the Manhattan Collection has been produced with today's modern technological advancements behind the crafted manufacturing process, ensuring these bricks deliver consistent strength, durability and longevity as well as the benefits of Exposure Grading that actual recycled bricks may not have.

CHELSEA 

TRIBECA 

MANHATTAN: TRIBECA

"The highly sought after Industrial Chic look and feel can be achieved with the cleverly crafted Manhattan Collection of recycled-look bricks."

ALTITUDE

As one of our most successful and popular ranges, Altitude clay bricks are a semi-glazed, wirecut finished brick product that provides texture and colour consistency. Created with a selection of on-trend colours, each brick colour has been named after an impressive pinnacle symbolic of the grandiose nature of awe-inspiring mountains, fitting of the premium nature of this quality product.

OLYMPUS 

EVEREST 

MATTERHORN 

APOLLO 

“Mountains are the beginning and the end of all natural scenery.”
– Richard M. Nixon

ALTITUDE: APOLLO

METALLIC

The PGH™ Metallic range are a clay extruded, wirecut brick finished with a subtle metallic sheen to achieve a more opulent effect. Often used as the dominant façade surface in many modern residential designs, this popular brick can be used to achieve a diverse spectrum of design look and feels.

Most recently the PGH™ Metallic Pewter brick was raised to a new level of fame when selected on The Block 2017 as the hero façade brick in the house rear extension by Sticks and Wombat. Used with a dark mortar, this particular look and feel became an overnight hit and now continues to be a highly sort after combination.

OPALINE™

With clean lines, a beautiful smooth satin finish and colour shades of deeper undulation that are rich in character, this brick can be used as a stand alone statement or a matched finish to the Metallic and Dry Pressed Architectural ranges.

TOURMALINE 

GARNET 

TIGER EYE 

OPALINE: TOURMALINE

SMOOTH

Known for beautiful clean lines and smooth-face textures, the PGH™ Smooth range represents just that. As a popular choice with architects and designers, the smooth texture and sharp lines create a strong, clean aesthetic for residential and commercial building projects.

Available in a palette of inspirational Australian natural colours, selection options range from more matte colour choices to those with some character building colour depth and movement, such as seen in Copper Glow, Black & Tan and Rustic Harvest Cream.

PGH™ Smooths can be colour matched with bricks from the PGH™ Velour range to achieve tone and textural variation.

NATURAL VARIATIONS

PGH™ bricks are made from natural clays, fired at extreme temperatures creating products of enduring colour and character. The natural variation in both clay and the firing process means textures, composition, size and colour including the appearance of flashing, will vary from batch to batch. Often the character created by this variability is the very reason bricks are desirable.

BLENDING AND CLEANING

Blending

It is essential that all bricks be carefully blended from at least three or four different packs/pallets at the time of laying to provide a consistent colour and texture. Your bricklayer is responsible for ensuring an even colour distribution.

Brick Cleaning

Brick cleaning is a specialist trade and should only be undertaken by a professional. The chemicals and high water pressures used can easily damage the product, if not done correctly. Different brick textures and colours often have different cleaning considerations. Dry brushing bricks periodically to remove residual mortar is an effective way to reduce the amount of effort required to clean bricks. Bricks should be cleaned within 2 to 14 days of laying.

Brick Cleaning Guides are available:

pghbricks.com.au

thinkbrick.com.au

Alternatively, please contact PGH™ on 13 15 79 or Think Brick Technical Hotline on 1300 667 617.

Disclaimer: Clay bricks are made from naturally occurring minerals. Variations in colour, texture, and size are natural characteristics of clay products and production variations can occur from batch to batch. Colours shown are indicative only and should not be used for final selection. In assessing colour in the finished product, bricks should be viewed at a distance of 4-6 metres. Products ordered should be chosen from actual samples current at the time of order and are subject to availability. Whilst every effort is made to provide samples, brochures and displays consistent with products delivered to site, they should be viewed as a guide only. Customers should ensure that all delivered products are acceptable, and any concerns about products are notified to PGH Bricks & Pavers™ prior to laying. All warranty claims against product must be made prior to the product being laid. Efflorescence may sometimes appear on bricks. It's a white, salty powder usually from salts in cement and mortar. Fortunately, the powder is completely harmless and will usually weather away with time. You can brush it off, although it may return if the salt and moisture source is still active. **WARNING:** Bricks contain crystalline silica. Cutting or grinding these products creates dust, which may be hazardous and should not be inhaled. Please ensure that when cutting or grinding, an approved mask (respirator) is worn. **Cultured Stone Disclaimer:** Shade variations can occur from batch to batch. Colours shown are indicative only and should not be used for final selection. © Copyright PGH Bricks & Pavers Pty Limited – all rights reserved 2018. PGH™, PGH Bricks & Pavers™ are registered trademarks of PGH Bricks & Pavers Pty Limited in Australia, other countries or both.

Warranty: The brick colours shown in this brochure are an indication only and may be different from the actual product. It is a good idea to confirm the availability and view the latest batch colours at one of our Selection Centres before making your decision, and always check the delivered packs as soon as possible. All warranty claims must be made prior to the product being laid. **Transport & Delivery:** To ensure the safe and timely arrival of your bricks, there are a number of considerations that must be made. Bricks may have been transported several times prior to them arriving on site. During this handling, chipping may occur. This will not affect the performance of the brick. If there is an issue, please contact PGH Bricks & Pavers™ to organise a site meeting prior to laying. For specific details, please contact our Customer Service Centre on 13 15 79. **Terms of Sale:** PGH Bricks & Pavers™ is unable to accept liability for costs incurred as a result of failure or delay in delivery of the product. For a complete copy of our Terms of Sale, please contact a PGH™ Selection Centre for terms and conditions.

BRICK DURABILITY

Salt Attack Resistance

Bricks are commonly classified into two categories for Salt Attack Resistance:

1. **Exposure Grade (EXP)** – the product is suitable for a severe marine or saline environment. Exposure Grade bricks are less susceptible to salt attack. A severe marine environment is defined as: up to 1km from a surf coast or up to 100m from a non-surf coast.
2. **General Purpose (GP)** – the product is suitable for general environmental conditions. These bricks should not be directly exposed to saline environments. For more information, visit thinkbrick.com.au

Solar Absorptance Rating (Basix Rating)

When designing energy efficient buildings, the architects and consulting engineers need to be able to calculate the heat loss or gain of materials used to construct the buildings. This is why building materials are categorised into 3 categories: **Light (L)**, **Medium (M)** and **Dark (D)**. **Light** coloured being a low solar absorptance and **Dark** coloured being a higher solar absorptance.

PGH™ SELECTION CENTRES

Selecting PGH™ bricks has never been easier. At our large network of Selection Centres we offer many services such as colour scheming, product selection and technical advice. Make an appointment today.

PGH™ BRICKS ALBION PARK RAIL SELECTION CENTRE

49 Durgadin Drive, Albion Park Rail, NSW 2527
02 4256 5826

PGH™ BRICKS BERESFIELD SELECTION CENTRE

Corner of Canavan & Parish Drive, Beresfield, NSW 2322
02 4949 0600

PGH™ BRICKS FORSTER SELECTION CENTRE

68 Kularoo Drive, Forster, NSW 2428
